RemoteAware™

MAKES REMOTE MONITORING EASY

We provide branded IoT applications for equipment OEMs, distributors and system integrators.

NEW BOUNDARY TECHNOLOGIES®

SAVE TIME AND COST

Creating smart equipment applications can take months or years and require costly software development.

RemoteAware provides private-label branded web applications to monitor and control remote equipment

Eliminate upfront development costs

No programmers or IT resources needed.

You reap the benefits of a connected product in just one business day.

FIELD PROVEN

RemoteAware application services are field proven in mission-critical applications.

We have been providing Machine to Machine (M2M) and industrial Internet of Things (IoT) applications since 1985. We are here for you today and long into the future.

SECURITY BUILT IN

RemoteAware provides end-to-end secure applications.

End-to-end data encryption and authentication, cellular private networks, roles-based user security, and state-of-the-art secure hosting are just a few of the features supported by the RemoteAware application service.
